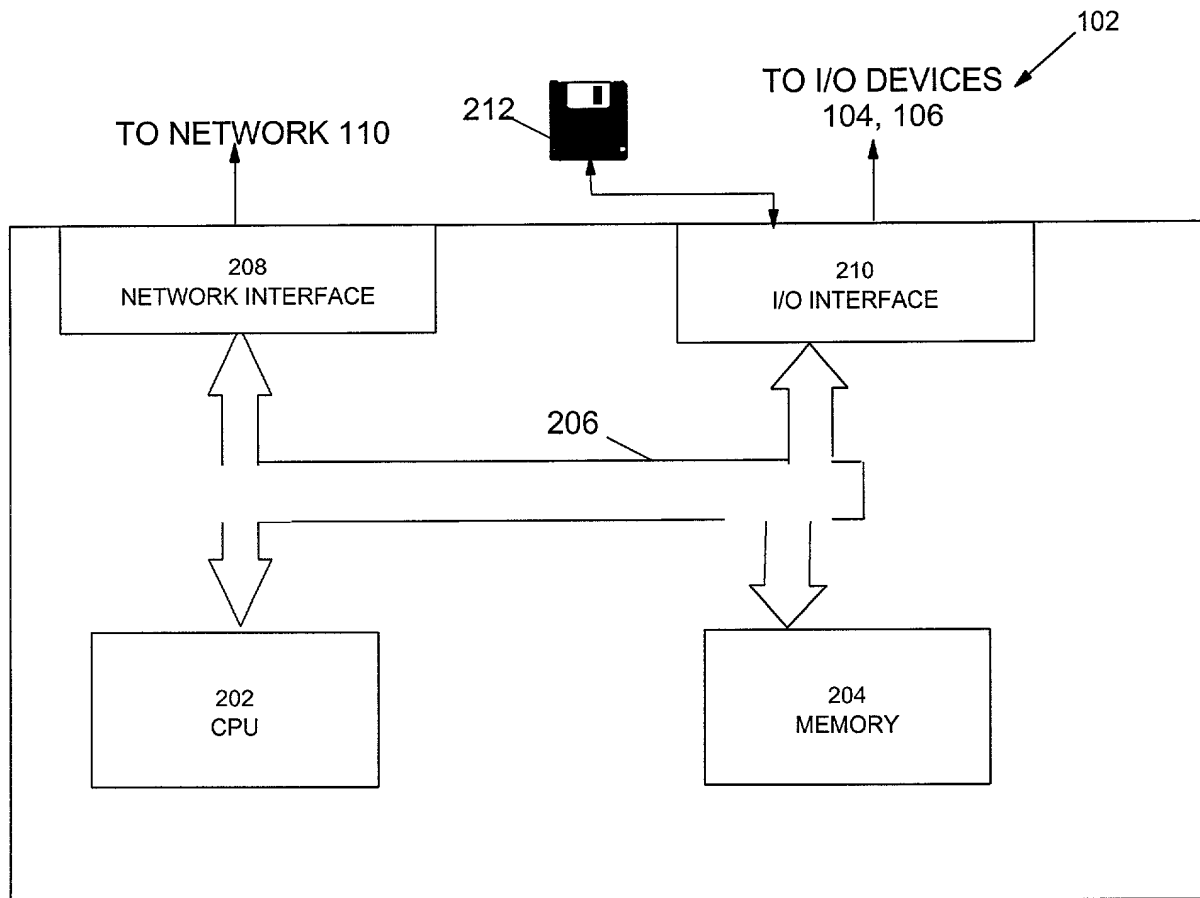

Figure 3a

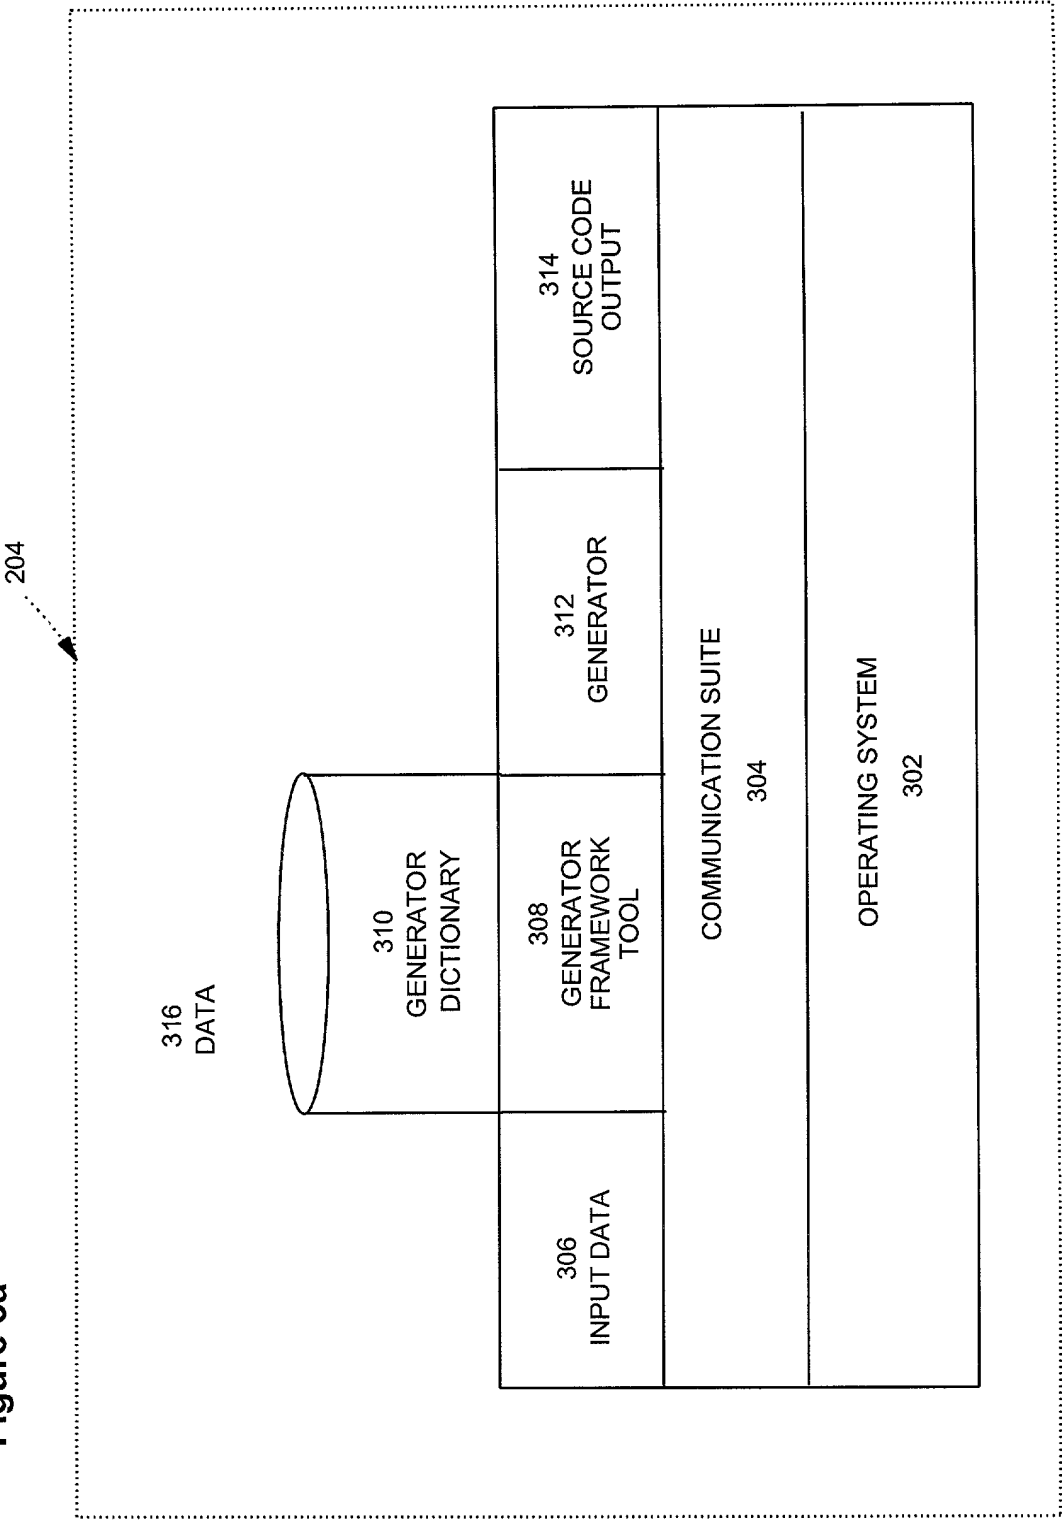

Figure 3b

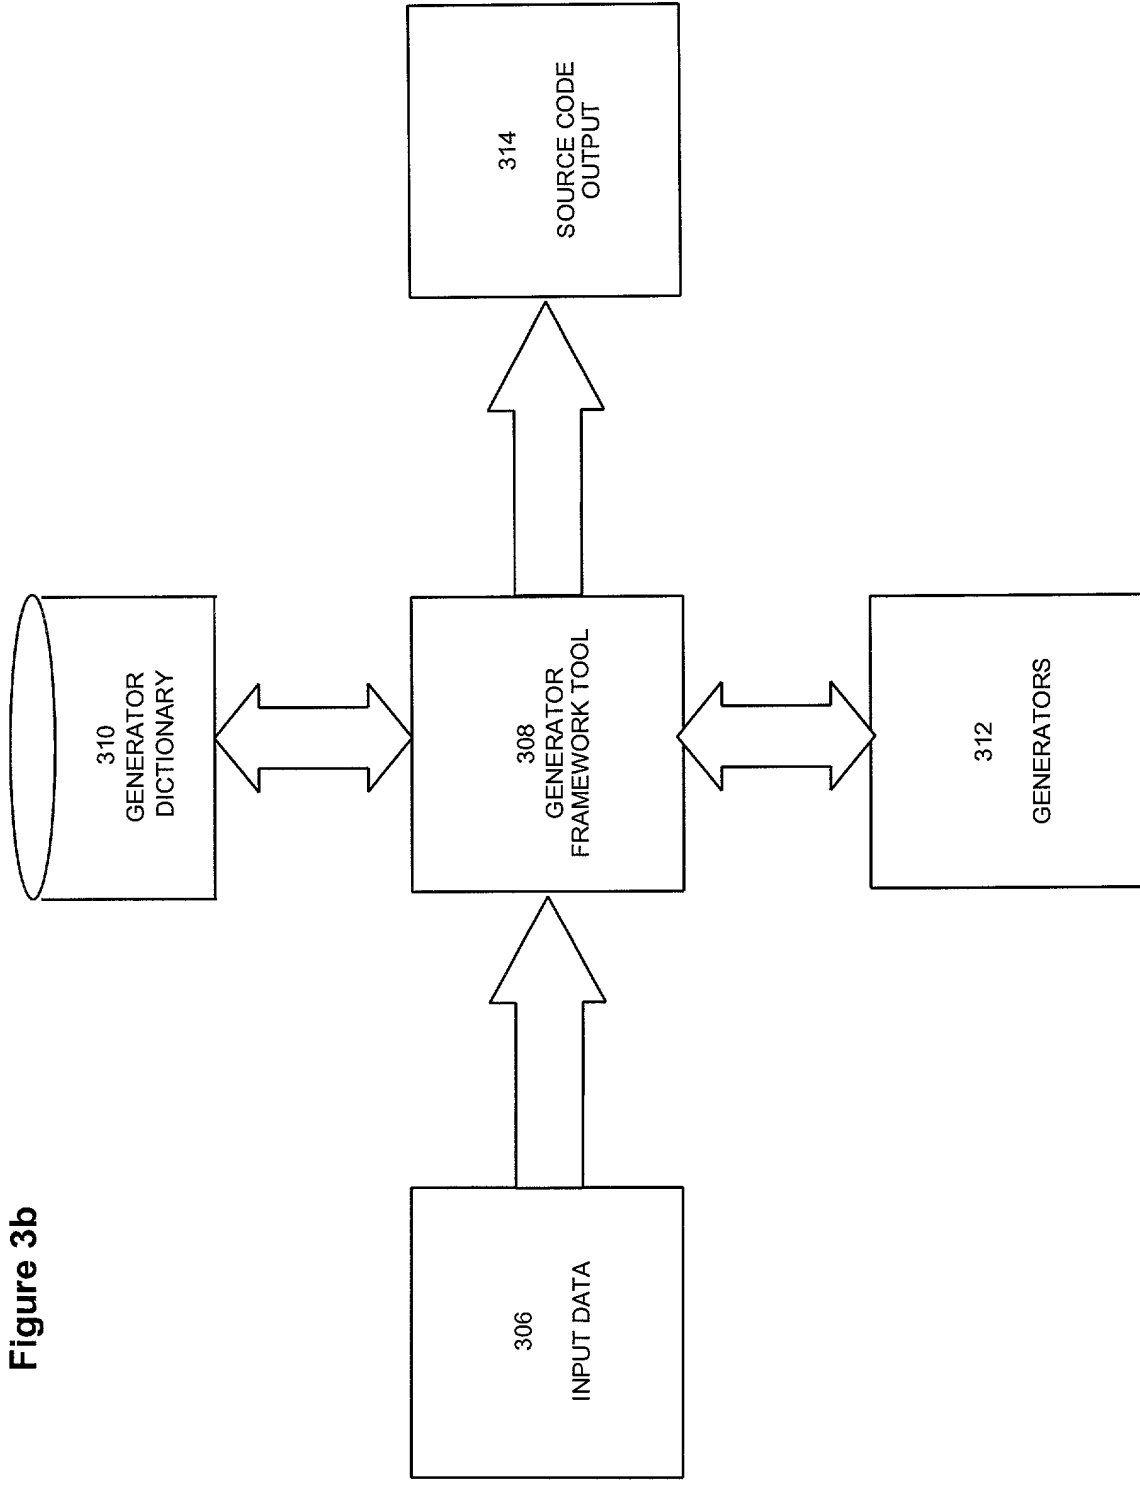

Figure 3b is a block diagram of a generator framework tool (308) in accordance with the present invention. The generator framework tool (308) is configured to receive input data (306) and generate source code output (314) based on the input data (306) and a generator dictionary (310). The generator framework tool (308) is also configured to interact with generators (312) to generate the source code output (314).
